

## Road Plan Report 20-21

As presented, there is a large emphasis in the main body to correct drainage problems all over town. In many cases those projects are pre cursors of follow up paving this year or the next. We are trying to keep to a sequence where we dig the road first for drainage so that we aren't coming back after having just paved the road. In some cases that is not an option due to undetected structural issues.

In addition to complete road reclamation and mill and pave projects, here is a great deal of road surface being patch paved and/or being re-surfaced with chip seal to provide an overall smooth riding surface that will last for some time. Between all the listed treatments we will be resurfacing approximately 24.6 miles of roadway.

Other surface maintenance will include crack sealing joints and the reconditioning of two bridge decks (Turkey Hill and Buttonshop). The latter keeps our bridge maintenance program on schedule. We also have two bridges scheduled for reconstruction which have been delayed for permitting (Meadowbrook and Brushy Hill over Deepbrook). The bridge funding is separate from our road funding and is noted separately in the CIP. After the two listed bridges, we will have 11 remaining for scheduling and reconstruction. Some may technically qualify for State funding at 50%, but that program has seldom been available or worked for the Town

Baring the usual problem of unforeseen circumstances, we expect to be able to add some additional roads to our in-house patch paving as we close out the funding for our plan as currently presented. The Crew Leaders listed a number of other roads in every part of Town that need attention, which they will get as room appears in our funding.

## **2020 - 2021 ROAD PROGRAM**
